Trellix Security for Microsoft Exchange 8.8.1 – Release Notes

Release details

Trellix® Security for Microsoft Exchange (TSME) 8.8.1 includes feature enhancements and addresses known issues. It also addresses product rebranding changes.

This release is cumulative and includes all features and fixes from the previous release. We recommend that you always upgrade to the most current update.

This release supports:

- **Trellix® ePolicy Orchestrator - On-prem** — 5.9.x, 5.10.x
- **Trellix® Agent** — 5.7.7
- Engine version — 6500.9779
- DAT version — 10483.0000

As part of rebranding, the certificates used to sign our software have been updated. If your enterprise automatically updates root certificates, the software update/installation does not require any additional effort. However, if your enterprise manages root certificate updates manually, you need to install the new intermediate and root certificates.

For information on downloading and installing the certificates, see KB91697.

Rating

The rating defines the urgency for installing this update.

This release is mandatory for all environments. Failure to apply mandatory updates might result in a security breach. Mandatory updates resolve vulnerabilities that might affect product functionality and compromise security. You must apply these updates to maintain a viable and supported product.

What's new

This release includes these new features and changes.

Rebranding changes

This is solely for informational purpose, there is no action required. You can continue to secure your organization with **Trellix Security for Microsoft Exchange** as usual.

You will notice the following changes in the software:

- Product Name - McAfee Security for Microsoft Exchange is renamed to **Trellix Security for Microsoft Exchange**. All features and options prefixed with product name are renamed with the new product name. However, some of the UI references and file path are still referred to as MSME.

  ✎ **Note**

  > The name variation does not impact the product functionality and performance, you can manage and operate the product as usual.

- Brand logo - McAfee logo is replaced with Trellix logo.
- End User License Agreement and Copyright - The End User License Agreement and Copyright are updated as per legal requirements. Please read the agreement for details.

New features

Feature	Description
File extension support	This release supports the file type extension with more than three characters.
Enhanced public folder scan	This release includes the enhancement of PF scan in DAG environment.
Upgraded postgress	This release upgrades the postgress to version 12.10

Resolved issues

This release resolves these issues.
